## **DETAILED ACTION**

### ***Response to Amendment***

Receipt is acknowledged of applicant's amendment filed January 28, 2008. Claims 21 and 22 have been canceled without prejudice. Claims 12-16, 18-20 have been amended. Claims 12-20 are pending and an action on the merits is as follows.

### ***Specification***

Receipt is acknowledged of applicant's amendment to the specification filed January 28, 2008 to now include references to foreign priority documents.

### ***Allowable Subject Matter***

Claims 12-20 are allowed.

The following is an examiner's statement of reasons for allowance: none of the cited prior art references (Lake et al (US 5,260,556), Hamisch (US 3409760)), taken alone or in combination of other references, discloses, teaches or fairly suggests a coded target used in photogrammetry or a photogrammetry process using the coded target comprising, among other things, all sectors in the first coding ring are the same color except for one that is a complementary color.

Lake discloses an optically readable coded target comprising at least first and second concentric coding rings (Fig 3: ring with 13c and ring with 13b) arranged around a central area comprising a central disk (bull's eye 21) surrounded by a first ring (23a) surrounded by the coding rings, and a second ring (23b) surrounding the coding rings. However, Lake fails to teach the concentric rings have equal angular sectors, and the arrangement of the second ring surrounding the first ring and the first coding ring

surrounding the second ring. Hamisch discloses at least first and second concentric coding rings with at least two equal angular sectors, arranged around a central area (aligner 16), where all sectors in the first concentric coding ring, which is the innermost coding ring, are the same color except for one that is a complementary color (Start mark 22, Fig 1 & 2). However, Hamisch fails to teach the central area comprises a central disk with uniform color surrounded by a first ring with a complementary color, the first ring surrounded by a second ring of a same color as the central disk.

Accordingly, one of ordinary skill in the art would not have been motivated to modify the teachings of the prior art to meet the claimed limitations as set forth in the present invention.

### ***Response to Arguments***

Applicant's arguments see pages 6 & 7, filed January 28, 2008, with respect to 112 second rejection of claim 12 and claim objection to claim 15 have been fully considered and are persuasive. Applicant's amendments to include "a first ring" and "a second ring" differentiate them from the "first and second concentric coding rings" which then further clarifies which ring, namely the "first coding ring" is required to have all its sectors the same color except for one. It then follows in claim 15 that the "first and second rings" have all sectors of the respective ring the same color. The 112 second rejection of claim 12 and the claim objection of claim 15 have been withdrawn.

### ***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
